DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: The specification is missing a brief description of Figures 4-6.

Appropriate correction is required.

Drawings

2. The drawings are objected to because the scanned figures are very grainy and dark making them difficult to view and/or read. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the

changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 1-11 are allowed.
4. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or suggest a device for monitoring overhead electrical lines wherein a multi-sensor, which includes a camera, is mounted to the power line. Furthermore, the multi-sensor with camera captures images of the power line and its surroundings, while the multi-sensor measures parameters relating to the condition of the power line such as angle of inclination, line sag, wind speed and direction, line and ambient temperature, as well as quality of the line current. The manner in which this differs from prior art is that the images captured by the camera are combined with the multi-sensor signal, which is transmitted remotely to a central station for observation on a display, and the information is displayed simultaneously, and in real time, as shown in Figures 7 and 8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George A. Bugg whose telephone number is (571) 272-2998. The examiner can normally be reached on Monday-Thursday 9:00-6:30, and every other Friday.
